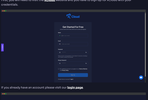
How to Integrate And Setup Supabase Linode Server with xCloud?

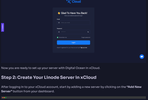
This guide shows how to set up the Linode server in xCloud. Follow the steps to quickly launch, manage, and scale your Supabase instance.

Step 1: Sign Up/Login With Linode

First, you will need to visit the **xCloud** website and you have to sign up for xCloud with your credentials.



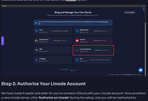
If you already have an account please click on **Sign-page**



Now you are ready to set up your server with Digital Ocean in xCloud.

Step 2: Create Your Linode Server in xCloud

After sign up, you will be prompted, and fully scaffolding a new server by clicking on the **"Add New Server"** button from your dashboard.



The next screen will provide the list of all available server providers. For tutorial purposes, we will create a Linode server and for that select the **Linode** option.
